Data Structures

For the purpose of this assignment the choice of data structure chosen is a list. To store data in the Dhoani two lists were created. One list collects and stores the item name and the other the item's amount entered by the user. There are four islands in this program(A, B, C, D) and each of these islands has their own list created where it stores data entered from the Dhoani.

```
#### ----LISTS---- ####
# Lists for Dhoani's Item Name and Item Amount.
dhoaniItemName = []
dhoaniItemAmount = []
# Lists for Supplier Island 01 Item Name and Item Amount.
supplierIslandAlpha = []
# Lists for Supplier Island 02 Item Name and Item Amount.
supplierIslandBeta = []
# Lists for Island A Item Name and Item Amount.
island_a = []
# Lists for Island B Item Name and Item Amount.
island_b = []
# Lists for Island C Item Name and Item Amount.
island_c = []
# Lists for Island D Item Name and Item Amount.
island_d = []
#### ----LISTS---- ####
```

Classes

This program consists of only one class and that is a superclass. This class functions to nest different functionalities(functions) needed to run the program. Main functions of this superclass is to display a separate menu needed for various parts of the duration of the program as well as show to show functions displaying the Dhoani's specific functions and messages.

```
#### ----CLASSES---- ####
# This class will display Dhoani's drive and stop messages also the
various menu's needed for this program.
class MENU_AND_TRAVEL:
    # Dhoani's function messages.
    drive = "Dhoani is now travelling to "
    stop = "Dhoani has stopped at "

    # Dhoani's drive function.
    def get_drive(self):
        # Prints message of the Dhoani's function.
        return self.drive

    # Dhoani's stop function.
    def get_stop(self):
        # Prints message of the Dhoani's function.
        return self.stop

    # This function displays the main console menu.
    # Option 6 is continue and option 7 is quit.
    def consoleMenu(self):
        print("")
        print("")
        print("-----")
        print("|          BigCon Construction          |")
        print("-----Menu-----")
        print("1- Add Items                               |")
        print("2- Remove Items                             |")
        print("3- Search Items                             |")
        print("4- Deliver Items                             |")
        print("5- Print Items                               |")
        print("7- QUIT                                     |")

```

Functions

This program consists of a total of eleven functions and one while loop. Five out of eleven of those functions help run the program generally. One function's main job is to display the main console menu that greets the user when the program is run. This main console menu iterates multiple times and is called in the program globally if the user wishes to add, remove, search, deliver to, print or quit the program. Other than the main console menu there are two additional menus that display an items menu and a destinations menu. There is no separate function created in the program that lets the user quit the program. The function of quitting the program is implemented using the functionality already provided in the Python programming language.

```
# Iterates the program.
while True:
    #

#### ----FUNCTIONS---- ####

# Calling the function globally.
# Displays main console menu.
menu_and_travel.consoleMenu()

```

Menus

Below are various menus that are present in the program.

Main Menu (Console Menu)

Use one of the each options mentioned to use the program.

```
-----  
|      BigCon Construction      |  
-----Menu-----  
1- Add Items                    |  
2- Remove Items                 |  
3- Search Items                 |  
4- Deliver Items                |  
5- Print Items                  |  
7- QUIT                         |  
-----
```

Items Menu

This menu displays a list of the items accepted in the Dhoani and separate islands.

```
-----  
|      BigCon Construction      |  
-----Items-----  
1- Diesel                       |  
2- Frozen                       |  
3- Fridge                       |  
4- Food                         |  
5- Protected Material           |  
6- Unprotected Material         |  
-----
```

Deliver Menu

This menu displays a list of destinations the Dhoani can travel to.

```
-----  
|      BigCon Construction      |
